# Chapter 1

## Results and Discussions

This chapter presents results and discussions from this special problem. Its goal is to provide a comprehensive analysis and interpretation of the data collected for alamSYS's internal and external components. As a result, this chapter is divided into the following sections:

- (a) Documentation for alamSYS
- (b) DMD-LSTM Results and Discussions
- (c) ALMACD Results and Discussions
- (d) alamSYS System Tests Results and Discussions
- (e) Results and Discussions for the Real World Application of alamSYS

### 1.1 alamSYS Documentation

The goal of this section is to thoroughly document the current state of the alamSYS in order to facilitate meaningful discussions.

### 1.1.1 Documentation for alamAPI and Database

xxx

### 1.1.2 Documentation for alamSYS Preprocessor

xxx

### 1.1.3 Documentation for alamAPP

xxx

### 1.1.4 Build and Deployment Guide

## 1.2 DMD-LSTM Model Results and Discussions

This section presents and discusses the Deep Learning Model’s training, testing, and cross-validation results.

In Table 1.1 the training error metrics are shown for each of the window sizes tested.

Table 1.1: DMD-LSTM Training Error Metrics Scores for Different Window Sizes

Error Metrics	<i>Window Sizes</i>			
	5	10	15	20
<b>MSE</b>	0.000037	0.787877	0.006917	0.057851
<b>RMSE</b>	0.006106	0.887624	0.083166	0.240522

Table 1.1 continued from previous page

Error Metrics	<i>Window Sizes</i>			
	5	10	15	20
MAE	0.004175	0.755407	0.067645	0.202746
MAPE	0.000001	0.000194	0.000017	0.000053

Where it is observed that the best performing model based on having the lowest MAPE score is the DMD-LSTM with a window size of 5. Moreover, we can see the differences from each MAPE score for each window size in the Figure 1.1 shown below.

Figure 1.1: Comparison of MAPE Scores for DMD-LSTM Model Training Across Different Window Sizes

The figure above also shows that the MAPE score for window sizes 15 and 20

is higher than the MAPE score for window size 10. MAPE score increases from window size 15 to size 20, indicating that increasing window size may result in a lower performing model.

Furthermore, as previously stated, the window size of 5 results in the best MAPE score being the lowest. Where it outperforms the worst performing model (DMD-LSTM with window size 10) by 0.000193 units. As illustrated clearly in Figure 1.1.

Knowing that the DMD-LSTM model performs as expected based on the training data scores, it is critical that we also examine the training data results from a baseline LSTM. The baseline LSTM is, as the name implies, a simple LSTM model lacking the DMD component. The table below shows the results of the baseline LSTM training.

Table 1.2: Baseline LSTM Training Error Metrics Scores for Different Window Sizes

Error Metrics	<i>Window Sizes</i>			
	<b>5</b>	<b>10</b>	<b>15</b>	<b>20</b>
<b>MSE</b>	2912.840703	191.935882	1118.183283	706.136814
<b>RMSE</b>	53.970739	13.854093	33.439248	26.573235
<b>MAE</b>	35.301888	9.480864	22.099720	18.285352
<b>MAPE</b>	0.009618	<b>0.002527</b>	0.006024	0.005004

According to the table above, the baseline LSTM with window size 10 performs the best, with the lowest MAPE score of 0.002527 when compared to the other baseline LSTM models.

However, the DMD-LSTM model with window size 5 outperforms it by 0.002526. As a result, the alamSYS makes use of the DMD-LSTM model, specifically the one with a window size of 5. Where from now on, the DMD-LSTM model refers to the DMD-LSTM model with a window size of 5.

Nonetheless, the DMD-LSTM model’s performance is limited to the training dataset from PSEI, and it must be cross-validated using data from other stocks, which includes the PSEI validation dataset. The results of this cross-validation is presented in Table 1.3. It should also be noted that cross-validation uses logarithmic normalization as a data preprocessing technique to make the dataset more normal, which aids in analyzing the model’s performance with the given dataset. Normalization techniques, in particular, allow for closer variation within the forecasted data. (S.Gopal Krishna Patro, 2015).

Table 1.3: DMD-LSTM Cross-Validation Error Metrics Scores

<b>Stocks</b>	<b>MSE</b>	<b>RMSE</b>	<b>MAE</b>	<b>MAPE</b>
<b>PSEI</b>	0.00002	0.00419	0.00328	1.510000e-03
<b>AC</b>	0.00236	0.04856	0.03414	6.110000e-03
<b>ALI</b>	0.00255	0.05054	0.03645	1.597000e-02
<b>AP</b>	0.00129	0.03596	0.02515	9.220000e-03
<b>BDO</b>	0.00160	0.03999	0.02799	7.250000e-03
<b>BLOOM</b>	0.01883	0.13721	0.06901	1.052898e+12
<b>FGEN</b>	0.00224	0.04733	0.03265	1.197000e-02
<b>GLO</b>	0.00211	0.04595	0.03149	4.680000e-03
<b>ICT</b>	0.00335	0.05785	0.03731	3.005818e+11
<b>JGS</b>	0.00331	0.05752	0.03992	2.009923e+11
<b>LTG</b>	0.01567	0.12518	0.05858	3.583335e+12
<b>MEG</b>	0.00431	0.06565	0.04422	1.393042e+11
<b>MER</b>	0.00326	0.05708	0.03770	9.170000e-03
<b>MPI</b>	0.00273	0.05230	0.03390	2.497000e-02
<b>PGOLD</b>	0.00149	0.03865	0.02818	7.880000e-03
<b>RLC</b>	0.00338	0.05817	0.03978	6.922000e-02
<b>RRHI</b>	0.00131	0.03618	0.02699	6.390000e-03
<b>SMC</b>	0.00137	0.03702	0.02317	5.690000e-03
<b>TEL</b>	0.00178	0.04214	0.03002	4.240000e-03
<b>URC</b>	0.00297	0.05447	0.03742	1.798000e-02

As shown in the table above, the chosen DMD-LSTM model performs well across all other stocks, demonstrating that the model is not overfitted to the training dataset. This score additionally suggests that the model works with non-training data.

The figures below show a 100-day worth of predicted prices versus actual prices to better visualize the performance of the DMD-LSTM model for each stock.

Figure 1.2: Actual vs Predicted Prices on AC for 100 days

Figure 1.3: Actual vs Predicted Prices for ALI over 100 days

Figure 1.4: Actual vs Predicted Prices for AP over 100 days

Figure 1.12: Actual vs Predicted Prices on MEG for 100 days

Figure 1.13: Actual vs Predicted Prices on MER for 100 days

Figure 1.14: Actual vs Predicted Prices on MPI for 100 days

Figure 1.15: Actual vs Predicted Prices on PGOLD for 100 days

Figure 1.16: Actual vs Predicted Prices on PSEI for 100 days

Figure 1.17: Actual vs Predicted Prices on RLC for 100 days

Figure 1.18: Actual vs Predicted Prices on RRHI for 100 days

Figure 1.19: Actual vs Predicted Prices on SMC for 100 days

Figure 1.20: Actual vs Predicted Prices on TEL for 100 days

Figure 1.21: Actual vs Predicted Prices on URC for 100 days

The figures above show that the predicted prices follow the actual price trend. In addition, the discrepancy between predicted and actual prices is relatively small, as evidenced by the error metrics scores shown in Table 1.3.

However, the MAPE scores for BLOOM, ICT, JGS, LTG, and MEG range from ten billion to hundred billion. This outlier in the data is, fortunately, just the result of the applied logarithmic normalization, where some of the data in the datasets of the aforementioned stocks are in the negative range, that influence the calculation of the MAPE scores using the scikit-learn library. Because this library handles the calculation of the MAPE scores, there is no way to fix this bug. Moreover, if we take a look at the graphs of the 100 days prediction versus the actual for the aforementioned stocks in Figures 1.6, 1.9, 1.10, 1.11, and 1.12, respectively, it can still be observed that the model performs well on these stocks.

Not to mention that the other error metrics used show the same performance levels across the different stocks when the DMD-LSTM model is utilized. Meanwhile when the data normalization is removed, the MAPE scores for BLOOM, ICT, JGS, LTG, and MEG become 0.068108, 0.037207, 0.039754, 0.057332, and 0.044411 units, respectively.

The successive predictions for the following day and up to ten days were tested using the price data from PSEI in order to make the system’s predictions more useful for actual utilization. Table 1.4 shows the MAPE scores for the successive predictions of the DMD-LSTM for each days.

Table 1.4: DMD-LSTM Successive Predictions

Successive Days Predicted	Actual and Predicted Data Ratio	MAPE Score
1	100%	0.00973
2	80%	0.13403
3	60%	0.15782
4	40%	0.15646
5	20%	0.13910
6	0%	0.12494
7	-20%	0.11283
8	-40%	0.10014
9	-60%	0.08914
10	-100%	0.08976
